

IP Location

Provides:

This API provides information about a specific IP Address. Information available:

- Status
- Message
- Continent
- Continent code
- Country
- Country code
- Region
- City
- District
- Zip code
- Latitude
- Longitude
- Timezone
- Currency
- ISP
- Organization
- AS number
- AS name
- Reverse DNS
- Mobile/cellular connection
- Proxy
- Query

Key Provisioning:

- N/A

Pain factor (0=easy...5=nightmare): 

Quotas:

- N/A

The Good:

- Customizable requests to only receive data you want within the http request
- No API Key or quotas/limits

The Bad:

- Only an approximation/guess of the general location of an IP Address

The Ugly:

- ...

Documentation: <https://ip-api.com/docs/api:json>
